

Aerial Chain

Wings of Steel · Aerial chains

TECHNICAL RIDER / EN

29.09.2026

Rigging point	Minimum 1,000 kg (1 t) permissible load capacity for the agreed setup.
Height	Minimum 4.50 m; recommended 8-10 m.
Clear space	At least 2 × 2 m clear floor area and aerial space.
Performer flying	A suitable performer-flying winch for the agreed setup.
Duration	5 minutes.

Setup & coordination

Two alternatives without a winch are possible by prior agreement: an adapted act on a static rigging point, or a manual hauling system with a pulley. A carpet may be used by agreement to protect the stage from scratches.

Music, lighting & costume

Music as in the video, or by agreement. Suggested lighting: cyan, red and white; strobe only by agreement. Fire or laser effects require separate technical coordination. Costume as in the photos / video, or by agreement.

Load capacity means permissible loading, not breaking load. The entire load path, including dynamic loads, must be assessed and approved for performer flying by the responsible qualified person. These minimum requirements do not replace technical approval of the actual setup.
